PRODONT-HOLLIGER

PRODONT-HOLLIGER

our vision

our mission

We believe healthcare is, above all, about quality of life. Medical treatments are more than just procedures; they restore health, comfort, confidence, and happiness, improving the lives of millions of patients each year. Our vision is to pave the way for a more human-centered healthcare industry, based on proactive, lifelong care.

Providing you with integrated, trusted solutions to allow you to focus on what matters most while improving daily practice.

We provide comprehensive and intuitive workflows that put technology at the service of people and help healthcare professionals restore patients' health efficiently and cost-effectively.

PRODONT-HOLLIGER, A LONG HISTORY OF ENTREPRENEURS AND CREATORS

1948

In Auvergne (Center of France), Mr. Dubost creates his instruments range. Specialized in knives manufacture, he wants to meet the demands of dentists.

1960

After Mr. Dubost death, Mr. Maréchal, technical manager, becomes general manager and creates the SAFICO® instruments range.

1975

BBernard Holliger creates the ACTUAL® mirrors range.

1986

PRODONT-HOLLIGER becomes part of NEW GROUPE NADIA, with 3 production facilities in France.

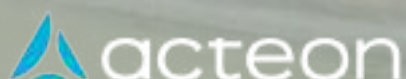

2014

The 3 production facilities are regrouped in Olliergues (Center of France) for better service and performance.

2017

PRODONT-HOLLIGER joins ACTEON GROUP

INNOVATION QUALITY PERFORMANCE

Optimal crimping:

the frame suits the mirror, no sharp edges, no blood and dirt retention.

Flat and ergonomic soldering:

More comfortable for the patient during intra oral visualization.

2 types of stems:

**Standard (Simple Stem, SS)
and Cone Socket (CS)**

Simple Stem (SS)

Cone Socket Stem (CSS)

Cone Socket stem has a bigger diameter of thread (used mainly in Spain, USA, Canada and South Korea).

Control of the elimination of the tartar and the osseous defects in the mirror.

INNOVATION QUALITY PERFORMANCE

gingiprotect[®] bliss

A real protective shield for the gum and its epithelial attachment during trimming.

The indications for Gingiprotect[®] include:

- ▶ gingival recession during preparation of juxta- or intrasulcular margins.
- ▶ Access to bonding joints of ceramic adhesive restorations (CARs) for careful polishing.
- ▶ Removal of cement residue from implant crown abutments.
- ▶ Access to Class V cavities for composite bonding.
- ▶ Removal of the rubber dam during insertion and bonding of the prosthetic component.

"Respecting the marginal gingiva is an essential requirement in aesthetic restorations. Dr. Radisson's gingival retractor, the Gingiprotect[®], becomes, for those who try it, an instrument as indispensable as the periodontal probe."

Dr Jean-François LASSERRE (Bordeaux, FRANCE)

Dr ROOS* retractor for retrograde endodontics

* teacher in Strasbourg university

Control of the apical resection (removal of an abscess on the tip of the root) during every phase:

Retraction of the gum, drilling of the bone, the section of the tip of the root, curettage of the osseous basin, the preparation and the closing of the canal.

For retrograde root canal unobturation.

Notched mirror to prevent slipping on the bone.

Setting of implant with control of the axis while drilling and screwing.

Control of the elimination of the tartar and the osseous defects in the mirror.

3 in 1

All the benefits of an elevator, a retractor and the vision of a great mirror.

HOURIGAN

300.34 Kit 2 extractors for Long tooth

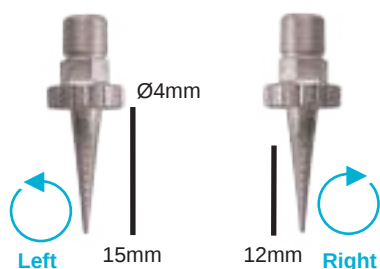

IMPLANT EXTRACTORS

less traumatizing in implant surgery, they minimize the osseous losses by avoiding bone drilling and surgery during the extraction of an implant.

Both left and right extractors are screwed and unscrewed alternatively into the implant to gradually separate it from the bone.

300.56 Kit 2 extractors for Short tooth

VIDEO

IMPORTANT: to avoid breaking the extractor tip, cut the end so that it fits into the inner diameter of the implant with leaving any space, and without cutting into the screw thread that receives the healing abutment.

SCREW EXTRACTOR

300.12

the screw extractor allows to raise a damaged screw by turning to the left (use a drill Ø0,6mm beforehand to make a hole in the screw).

Adjustable on contra angle or universal adapter for torque ratchet key. (diameter 2mm, length 22mm, point Ø0,44mm)

The screw remover fits on the adapter or contra-angle instrument (ref. 300.09).

BLISS® KITS

A turnkey solution for each clinical protocol

Bliss® ACteOn ® kits have been designed with the help of practitioners and hygienists, to respond to all treatments.

they gather the essential hand instruments for the main dental procedures : diagnostic, prophylaxis, restoration and endodontics.

to offer the best working conditions, these instruments combine the comfort of the ergonomic Bliss® handle and the robustness of high quality stainless steel working parts.

This allows precision and efficiency in the clinical gesture.

For more convenience, Bliss® ACteOn ® kits are presented in sterilizable cassettes.

DIAGNOSTIC KIT

every consultation starts with these 3 instruments.

One end of the handle is flat to facilitate percussive diagnostics, allowing to evaluate the sensitivity and the mobility of the tooth and the sensitivity of the gum.
